Some of the app's most useful shortcuts are the hardest to find. As a result you may be unaware of them until someone points them out to you. One of the most useful shortcuts is the Alt (PC) / Option (Mac) key. You'll be surprised just how many hidden features it reveals. To get you started, here's a list of the Alt/Option key shortcuts for Lightroom Classic's Develop module. These shortcuts work in the right-hand panels of the Develop module. Lightroom Classic Shortcut #1: Reset sliders Hold down the Alt/Option key to reveal the option to reset sliders. Click on a Reset command to return the sliders below it to zero. This shortcut comes in useful for resetting multiple sliders with just one click. Just like the example shown here where the Highlights, Shadows, Whites and Blacks sliders have all been adjusted. The shortcut works in all the right-hand panels in the Develop module except the Tone Curve panel. Lightroom Classic Shortcut #2: Reset Masks The Alt/Option key has a similar function with Masks. Select a Mask, then hold the alt/option key. The word Effect above the adjustment sliders (see below) changes to Reset. Click Reset to return all the sliders to zero. In Lightroom 6 it works the same way with the Radial and Gradient filters. Hold it down to change the word Effect to Reset. Lightroom Classic Shortcut #3: Activate and deactivate solo mode When solo mode is activated Lightroom Classic only lets you open one panel at a time. It simplifies the display and means you spend less time searching for the tool you want to use. This is how the Alt/Option key shortcut works with solo mode. With more than one panel open: Hold the Alt/Option key down and click on a panel to close the others and leave that panel open. Or click on a closed panel to open it and close the others. Both actions activate Solo Mode at the same time. With one panel already open: Hold the Alt/Option key down and click on another panel to open it as well. Deactivates Solo Mode at the same time. These shortcuts work in all Lightroom Classic modules. Start your Lightroom Classic journey today. Get five free lessons and monthly tips and tricks when you join our free Mastering Photography newsletter. Lightroom Classic Shortcut #4: Move between Adjustment Brush and Erase Brush If you press the Alt/Option key while using the Brush Lightroom Classic switches to the Erase brush. This is a useful shortcut that lets you rapidly erase part of the mask you are creating with the brush. Release the Alt/Option key to go back to the current brush settings. This feature comes in handy for work like portrait retouching. Lightroom Classic Shortcut #5: Center the Crop Overlay When you click the Crop Overlay icon, grab a corner of the crop overlay and drag the mouse, the crop overlay remains anchored to the opposite corner. It looks something like this. But hold the Alt/Option key down when you grab a corner and drag the mouse and Lightroom Classic keeps the crop overlay centered. This is useful if you are using cropping as a kind of digital zoom, and want to keep the crop centered to take advantage of the better image quality at the centre of the frame. It may also be useful if you are cropping to eliminate vignetting caused by the wrong lens hood or too many filters stacked on the lens. It looks like this. Lightroom Classic Shortcut #6: Make fine adjustments in the Tone Curve panel Hold the Alt/Option key down while you make tone curve adjustments to slow the mouse drag speed down. This lets you make finer adjustments. Lightroom Classic Shortcut #7: Visualize post-crop Vignetting Hold the Alt/Option key down while you move the Midpoint, Roundness, Feather or Highlights sliders. This shows the effect with the Amount slider set to its maximum. If the Amount slider has a negative value, Lightroom Classic sets it to -100, and if it has a positive value it sets it to +100 when you press the Alt/Option key. It's an easy way to see the effect these sliders have on the photo. Lightroom Classic Shortcut #8: Hide the batch Update Process Version window When you click the lightning bolt icon below the histogram to update to the most recent Process version Lightroom Classic displays this window. Note the Update All Filmstrip Photos button at the bottom. This is a useful time-saving shortcut that tells Lightroom Classic to update all the photos in the current Collection or Folder to the newest Process version. Because of this, you may not want to tick the Don't show again box. If you hold the Alt/Option key down when you click the lightning bolt icon, Lightroom doesn't display the Update Process Version window. You can use this shortcut when you only want to update one photo in the filmstrip. Lightroom Classic Shortcut #9: Reset Color Grading Just like in the Basic panel, you can use the Alt/Option key to reset individual color wheels in the Color Grading panel. You can also click the word Reset at the top (marked below) to reset all three color wheels at once. The Alt/Option key as a visualization tool The following uses for the Alt/Option key all have one thing in common. They are designed to help you see which parts of your photo are affected by the changes you make in the right-hand panels in the Develop module. Lightroom Classic Shortcut #10: Show clipping with Exposure, Highlights, Shadows, Whites and Blacks sliders in the Basic panel In the Basic panel you can press the Alt/Option key while moving the Exposure, Highlights, Shadows, Whites or Blacks sliders to see if there are any clipped highlights or shadows. With the Exposure, Highlights and Whites sliders clipped highlights are shown in white or color against a dark background. With the Shadows and Blacks sliders, clipped shadows are shown in black or color against a white background. The colors in both cases indicate clipping in just one color channel (red, green or blue) or two of the three color channels (in which case you will see cyan, magenta or yellow). Lightroom Classic Shortcut #11: Show 100% hue in the Split Toning panel Hold down the Alt/Option key while adjusting the Hue slider under either Highlights or Shadows to reveal the effect with Saturation set to 100. This lets you see which color you have selected, something that is more difficult to perceive with Saturation at a low setting. Lightroom Classic Shortcut #12: Show a sharpening preview in the Detail panel The Alt/Option key is useful for determining the effect of sharpening on your photo. When you hold the Alt/Option key down and move the Amount slider the photo is shown in black and white to help you judge the effect more clearly. If you hold the Alt/Option key down and move the Radius slider the areas affected by Sharpening are shown in white against a gray background. When you hold the Alt/Option key down and move the Detail slider the areas affected by Sharpening are also shown in white against a gray background. If you hold the Alt/Option key down and move the Masking slider the areas affected by Sharpening are shown in white against a black background. Lightroom Classic Shortcut #13: Noise reduction preview in the Detail panel When you hold the Alt/Option key down and move the Luminance, Detail or Contrast sliders the photo is shown in black and white to help you judge the effect more clearly. Lightroom Classic Shortcut #14: See where chromatic aberration removal is being applied in the Lens Corrections panel Hold down the Alt/Option key when moving the purple Amount or green Amount sliders to reveal the areas affected by those sliders in black and gray. The rest of the photo (the unaffected area) is shown in white. Hold down the Alt/Option key when moving the purple Hue or green Hue sliders to see the range of tones encompassed by the sliders. Affected tones are shown in black and gray, unaffected tones are unchanged. Note that the wider the range of colors included with the purple Hue or green Hue sliders the greater the area of the photo affected by the purple Amount or green Amount sliders. The use of the Alt/Option key in this panel is to help you verify that your manual chromatic aberration removal is limited to genuine aberrations within the photo, and isn't inadvertently affecting other areas. Conclusion If there's a lesson to be learned about Lightroom Classic shortcuts it's that there are lots of hidden secrets to be discovered. Feel free to test out the Alt/Option key at any time to see if it does anything useful, no matter which module you are in. And if you find any, let us know in the comments!
